FALL PLANTING

F. W. BOLGIANO & CO.

07 E ST., N. W. · 411 NEW YORK AVE., N. E. · WASHINGTON, D. C.

SAVE THIS CHART

It shows the depths at which different bulbs should be planted.

Let this chart of the Master Gardener guide you in planting bulbs this fall. A general rule, he says, is to plant them at a depth equal to twice their diameter.

HOW TO PLANT

OUTDOOR CULTURE—Plant the bulbs as soon after September as possible to enable the roots to make good growth before the cold weather sets in. They require a moderately rich soil. For best results, apply Loma, Vigoro, Sheep Manure or Bone Meal. How far apart and how deep to plant the different bulbs is shown in the accompanying chart.

INDOOR CULTURE—Plant hyacinths, tulips and narcissus in a sandy soil. For forcing, bulbs should be planted from September until November, the earlier they are potted the better. After they are potted they may be set out doors and covered with a few inches of soil until freezing weather then brought into a

cool cellar and watered occasionally. If not possible to set them out doors they may be placed in a cool cellar, covered with soil and watered regularly. When the roots are well developed the bulbs may be brought into a cool room where they will flower very quickly.

GROWING PAPER WHITE NARCISSUS IN WATER—Place a dozen bulbs in a shallow bowl, cover with small stones and keep filled with water. Place a few small pieces of charcoal in the bottom of the bowl to keep the water from fouling. Keep in a moderately temperate room. They require no care, no attention. They keep on growing and produce beautiful flowers in about six weeks.
